Doomsday Engine - Feature #1851

[UI] Dynamic release notes

2014-08-08 13:46 - skyjake

Status:	New	**Start date:**	2014-08-08
Priority:	Normal	**% Done:**	0%
Assignee:			
Category:	User experience		
Target version:	3.x		

Description

When Doomsday first starts up after an upgrade, a popup should appear notifying the user of relevant changes. This would replace the need for a release note page in the wiki.

This notification would need to be dynamic, so that it would:

- know which version the user upgraded from
- which is the current version
- download from the wiki all the changes fitting in this range and format them for display

This could be designed with DEW as the backend, so that each individual feature/note would have its own page in some special wiki category. Each item could have:

- a priority level for sorting (to show the more important ones first)
- title (single-sentence summary)
- optionally a picture
- short paragraph of text describing the feature (could contain links etc.)
