

Doomsday Engine - Bug #2095

[Ubuntu] "doomsday-stable" package on Launchpad is pretty much empty

2015-06-19 21:06 - skyjake

Status:	Closed	Start date:	2015-06-19
Priority:	Normal	% Done:	100%
Assignee:	skyjake		
Category:	Defect		
Target version:	1.15.1		
Description			
The stable 1.15 build 1616 built on Launchpad is incorrect: it doesn't contain any binaries or even data files. The source packaging script must have broken at some point.			
The unstable package works correctly. The stable packages built by the autobuilder itself are also working correctly.			

History

This is pretty strange. According to the [build log](#), everything was compiled correctly. However, nothing ends up in the final .deb package. The only explanation that comes to mind is that the install is going to the wrong directory.

- % Done changed from 0 to 100

Yep, the install was going to the wrong directory ("doomsday" instead of "doomsday-stable").
