Doomsday Engine - Bug #2367

[Unix] If directory "/usr/share/doomsday/data" exists, core packages not found

2019-12-11 06:09 - skyjake

Status:	New		**Start date:**	2019-12-11
Priority:	Low		**% Done:**	0%
Assignee:	skyjake			
Category:	Defect			
Target version:	2.3.x			

Description

The Unix builds normally use /usr/share/doomsday as the base directory. If one manually creates a data/ subdirectory in there, Doomsday cannot find the core packages that get installed in the base directory.

This is because the presence of a data subdirectory is specifically checked for in app.cpp directory mappings, and it overrides the default /data folder.

See discussion: https://talk.dengine.net/discussion/2761/net-dengine-stdlib-not-found-ubuntu

Don't check for "data" subdirectory; just attach App::nativeBasePath() to /data.
