Doomsday Engine - Bug #1135

Error when launching Snowberry and then doesn't run

Description

I'm having a problem with Snowberry running. It started with v1.10 and one day when I launch it, I receive an "errors occurred" message stating "See the logfile 'C:\Program Files (x86)\Doomsday\snowberry\snowberry.exe.log for details." The last time I used it, it worked just fine and one day, this error came out of nowhere. I tried uninstalling it completely, deleting the folders, and reinstalled it and it still has the same problem. Even with v1.11 and v1.12, upgrading or clean installing the program, the same error message keeps coming up. I have attached the snowberry.exe log file, which has the details.

My system specs are as follows:

Intel Core i7 2.67 GHZ
6 GB DDR3 1600 Triple Channel RAM
750 GB HDD
nVidia Geforce 240 1 GB PCIe 16x
Windows 7 Ultimate Service Pack 1

Labels: Snowberry, struct error, line 8
