<b>Target version:</b>	Modding		
<b>Description</b> It would be useful to have the option to use logical NOT with references in XG. For instance:  Ip0 = "lpref_ltagged_ceilings" Ip1 = 3  The above would reference both planes in ALL sectors with tag other than 3 (basically invert the selection criteria).  Obviously inverse versions might only be useful for some of the existing references.  <b>Labels:</b> XG
