Revision 10e9e15e - 2013-10-26 19:42 - skyjake

Windows: Updated app icons, deploy Doomsday icon to data/graphics/

ClientWindow was trying to load "doomsday.ico" from a native file but apparently it wasn't being deployed in the installation.

The app icons now contain sizes 16x16, 32x32, 48x48 and 256x256.

I'm not sure this can be entirely fixed. Particularly the icon appearing in the Add/Remove Programs dialog is most likely up to Inno Setup, and an icon has already been specified for the installer .exe.

As shown in the related commit, doomsday.ico is now included as a native file under data/graphics/ so that it can be loaded by Qt as the main window icon.

Commit [c7debe3](#) should address the missing icon in Add/Remove Programs/Control Panel. It appears that Inno Setup uses separate icon paths for everything and each must be set accordingly.

#5 - 2014-04-25 06:23 - sonicdoommario

Just wanted to update this. With the latest change the Doomsday desktop icons (at least on Win7 64-bit) show up fine and no manual configuring to get them to display correctly is needed.

Still showing up as a generic icon in Add/Remove Programs however.

The updated icon of [99770c4a](#) is being used by Inno Setup as the new uninstaller icon. This might mean that it gets confused by the included large size (256x256). We could try adding a separate icon with only the small sizes (16/32) for the uninstaller.

#8 - 2014-04-26 18:06 - skyjake

[60846f92](#) does not seem to help; the uninstaller icon is still a generic one in Add/Remove Programs.
