

Doomsday Engine - Feature #1658

Automatic port forwarding (UPnP/NAT-PMP/PCP)

2013-11-07 10:05 - skyjake

Status:	New	Start date:	2013-11-07
Priority:	High	% Done:	0%
Assignee:	skyjake		
Category:	3rd party compatibility		
Target version:	Multiplayer		
Description			
To facilitate running servers behind local internet gateways (routers, NAT, etc.), Doomsday should take advantage of UPnP, NAT-PMP and PCP to automatically allow the server's port to be forwarded to the correct place inside the local network.			
This should be helpful:			
<ul style="list-style-type: none">• UPnP Forum: SDKs<ul style="list-style-type: none">◦ Qt-based HUPnP (GPL3, LGPL)◦ libupnp (BSD license)• RFC 6886 - NAT Port Mapping Protocol• RFC 6887 - Port Control Protocol• RFC 8445: allow clients to automatically negotiate connection parameters with each other, bypassing the need to use upnp and related tech.

Another thing to consider is support for the ICE protocol, <https://tools.ietf.org/html/rfc8445>

This would allow clients to automatically negotiate connection parameters with each other, bypassing the need to use upnp and related tech.

Further, if Doomsday adopts the model of having single player games connecting to a multiplayer server launched automatically, this would allow for clients to dynamically negotiate with each other on which client should act as the server, based on whatever decision making scheme you want.
