

Doomsday Engine - Feature #1708

Logging by domain (with filtering)

2014-01-06 13:56 - skyjake

Status: Closed	Start date: 2014-01-06
Priority: Normal	% Done: 100%
Assignee: skyjake	
Category: Redesign	
Target version: 1.14	
Description It has long been an issue for developers that when working on a particular subsystem with a high verbosity of log messages, other subsystems have been spamming the log with messages that are not relevant to the task at hand. Also, entries intended for normal end-users and developers have not been segregated, causing potential confusion. Two changes are needed: <ul style="list-style-type: none">• Log messages need to be flagged by domain and audience.• The log needs to provide settings to filter by domain and audience (minimum level, dev-flag).

History

#1 - 2014-01-14 11:09 - skyjake

- Status changed from In Progress to Closed

- % Done changed from 40 to 100

Maintaining appropriate log levels and other metadata is something we need to do on ongoing basis, though.
