Description			
Doomsday Script needs to have a mechanism to derive instances from class objects. For instance, the functions for manipulating a specific type of object should be put in a shared class object.			
In practice, this can be a very weakly-typed OO system: classes and instances are both records, and can be used interchangeably.			
<ul style="list-style-type: none">• Member operator needs to look up symbols from superclasses.• Instantiating from a record using the call operator.• Calling a constructor automatically.
