

Doomsday Engine - Bug #1831

Closing Updater Settings dialog leads to checking for updates

2014-07-02 02:36 - danij

Status:	Closed	Start date:	2014-07-02
Priority:	Low	% Done:	100%
Assignee:	skyjake		
Category:	Defect		
Target version:	1.15		
Description			
Whenever the close button is clicked in the Updater Settings dialog an update check is executed each time. Simply closing the dialog after changing no settings should not lead to an update check the user did not request.			

Associated revisions

Revision 6ab3341d - 2014-11-16 19:32 - skyjake

Fixed|UI|Updater: Don't recheck if settings weren't changed

In the update notification dialog, if one opens the Updater settings and closes it without changing anything, a recheck of available updates is unnecessary.

IssueID #1831

History

danij wrote:

Once settings are changed once, they will forever be "changed" and cause an Update check each time the settings dialog is closed.

Many dialogs, including Updater Settings, are dynamically created when opened and deleted when closed, so keeping the "changed" flag until destruction of the dialog is not a problem.

if changing the updater settings via the gear button that appears following an update check; another update check will fire except this time, I'm unable to get out of the dialog until the update completes (which it never does) unless I cancel it.

I've never been able to reproduce this behavior. Does this happen with regularity?

I also get an alert about malformed JSON data when checking for an update using the Check Now... button in Updater Settings:

Fixed by [#1937](#).

Since your earlier fix I've been unable to replicate this behavior since. Seems fixed to me.
