<b>Description</b>			
<p>The ZDoom-extended MAPINFO syntax makes a various changes to the Hexen syntax (supported). While the existing parser detects and handles the majority of these changes gracefully, there is however a couple of previously required definition statement parameters which have been made optional in the ZDoom-extended syntax:</p> <p>The second <i>scrolldelta</i> parameters of Map.sky1 / Map.sky2 are no longer required (default: 0)</p> <p>Presently, the MAPINFO parser in idtech1 converter fails to handle this correctly.</p>
