

Doomsday Engine - Bug #225

SuSE missing dependencies (libvorbis)

2005-03-19 15:12 - alinezhad

Status: Closed	Start date: 2005-03-19
Priority: Low	% Done: 100%
Assignee:	
Category:	
Target version: 1.8.6	

Description

I've downloaded the 1.8.6 and tried to install it on my SuSE 9.1 box. "./configure" step is passed correctly; But, I receive errors at the "make" step, last lines of which are here:

```
=====
ranlib .libs/libdssdlmixer.a
creating libdssdlmixer.la
/usr/bin/sed: can't read /usr/lib/libvorbisfile.la: No
such file or directory
libtool: link: `/usr/lib/libvorbisfile.la' is not a
valid libtool archive
make3: * [libdssdlmixer.la] Error 1
make3: Leaving directory
`/home/s4/deng-1.8.6/Src/dsSDLMixer'
make2: [all-recursive] Error 1
make2: Leaving directory `/home/s4/deng-1.8.6/Src'
make1: [all-recursive] Error 1
make1: Leaving directory `/home/s4/deng-1.8.6'
make: * [all] Error 2 =====
```

Can you help me solve this? I couldn't find the right solution by a lot of attempt.

Thank you for your notice,
Bahram Alinezhad,

Building Doomsday requires the development libraries and headers for SDL_mixer. These have libvorbis as a dependency. Apparently you don't have the development libraries of SDL_mixer installed?

I have two suggestions:

1. Install the libvorbis-devel package. SuSE appears to have this package available.
2. Install the SDL_mixer development libraries. Check the www.libsdl.org website for both SDL and SDL_mixer development packages.

PS: I have received your two emails about this issue, and I did reply to

development file (i.e. /usr/include/SDL/SDL_mixer.h) is within SDL_mixer package.

Perhaps, in the next versions of doomsday, you should fix the problem of two pre-requisites which should be checked at "configure" step to avoid errors at "make" step:
1-libpng-devel 2-libvorbis-devel.

=====
~~PS: I have received your two emails about this issue, and I did reply to both of them immediately after receiving them. Evidently the replies didn't make it through. In the future, I recommend using the forums or the deug SourceForge pages to reach me.~~
=====

I wonder: You had replied me but I didn't receive anything!

Again, Thank you very much for your valuable software.

I have a suggestion and am going to bring it forward at:

http://sourceforge.net/tracker/?group_id=74815&atid=542102

Take a look at it.

This is a bug with the suse SDL_Mixer headers. I can't reproduce it on other distros (ie Ubuntu Dapper in a fresh pbuilder setup) with current release (1.9.0beta4). Closing bug. Please re-open if you can reproduce it.
