im using a asus windows 7 laptop. its one of the powerful one. it has a blue ray. its a geforce gt 540m. its a 64 bit computer.

i already was told to install to latest driver which is: '391.5" or something like that. i have already installed geforce experience.

i never had this problem on windows 10 way before. so im guessing its you guys end. the reason im using windows 7 laptop, is cause of old games.

- Status changed from New to Rejected

Sorry but there is little I can do to help here. I've long retired all my Win 7 machines.

Also, the bug tracker is not meant for tech support, I recommend you use the [forum thread](#) instead.
