Description

Tested on a 1.33ghz Apple Powerbook 15" G4 al with 1 gig of memory running a fully updated install of 10.4.6.

When loading any add-ons, aside from the resource pack, snowberry will crash upon launching of any doom wads. Attached is the bug report generated by OS X as it was the only one I could get.

What is printed if you select "Preview command line" from the Menu button?

From the dump I can see that it crashes because it tries to report an error after failing to open a Zip file. I tried it with jHRP.pk3 and some Doom PWADs, but couldn't reproduce the crash.

The following is the command line when trying to open a variety of add-ons. The jdpr will always work but the others fail to load. Thanks.

```

Shouldn't load zipped pk3s.
