

Doomsday Engine - Bug #303

configure fails

2006-06-26 15:05 - huafbauer

Status: Closed	Start date: 2006-06-26
Priority: Low	% Done: 100%
Assignee: yagisan	
Category:	
Target version: 1.9.0-beta4	

Description

on my system configure fails with following messages:
...
checking for AL/al.h... yes
zip warning: name not matched: ./Data/Graphics/*
zip warning: name not matched: ./Data/Fonts/*
zip warning: name not matched: ./Data/KeyMaps/*

zip error: Nothing to do! (./Data/Doomsday.pk3)
./configure: line 21007: cd: Build: No such file or directory
configure: creating ./config.status
uniq: confdefs.h: No such file or directory
config.status: error: cannot find input file: Makefile.in

With the attached path it worked.
Regards
Bernhard

ok, failed to realise someone should be in the Build subdirectory ...
With the attached patch both should work.

G'day,

Thanks for that patch. The .pk3 generation was quickly added just before release, and as you discovered not exactly fine-tuned.

Currently the build system is in a bit of flux as I investigate alternatives, so I've set this to remind myself that for whatever build system I finalise on, to make sure I don't duplicate this bug again.

As of svn 3435, this bug should be fixed with the new cmake build system.
