

Doomsday Engine - Bug #331

Snowberry: Conflict wizard - resolving partial conflicts

2006-08-05 04:21 - danij

Status: Closed	Start date: 2006-08-05
Priority: Normal	% Done: 100%

Category:	
Target version: 1.9.0-beta4	
Description	
Say you have the following addons installed:	
AddonA.PK3: provides: doom-model-a provides: doom-model-b	
AddonB.PK3: provides: doom-model-a	
AddonC.PK3: provides: doom-model-b	
Currently, the conflict resolution wizard will only allow me to select one of the above three addons. However it should be possible to use both AddonB.PK3 and AddonC.PK3 as long as AddonA.PK3 is not activated.	
Given that Snowberry allows me to setup a pretty complicated dependency structure with the modules in jDRP (which is excellent btw), it would be good if this wizard could be updated.	
Also, this wizard does not currently display which addon provides what, in complex cases such as this the info would be very useful. At least the user could then see that in actuality - there is no conflict between AddonB.PK3 and AddonC.PK3

I tried the above scenario and I was able to select both B and C.
